(54) DISTRIBUTED POWER SUPPLY SYSTEM

(57)Abstract:

PURPOSE: To enable a user to know the maintenance check timing of a distributed power supply easily by calculating the maintenance check timing of the distributed power supply and then reporting a next maintenance check timing based on the output of an operation means.

CONSTITUTION: Date/time data when a maintenance check was performed are input to a storage part 16 of a check timing operation means 191 every time when the maintenance check is performed. Then, an operation part 181 reads date/time of the previous check from the storage part 16, reads current date from the output of a timing part 17, and then calculates the date/time of the next check timing from the date/time of the previous maintenance check and the current date/time. Then, the operation part 181 judges whether the current date/time are the date/time of the next maintenance check obtained based on the data of the storage part 16 or not. When the date are not that of the next maintenance check, the difference between the date/time of the next inspection and the current date/time is obtained, the number of days until the check timing is calculated, and the calculated number of days is displayed on a display 15.
